

DOCFUSION®

DOCFUSION FOR MICROSOFT

INTELLIGENT AUTOMATION FOR THE MICROSOFT ECOSYSTEM

MICROSOFT - POWERING THE WORLD'S MOST IMPORTANT BUSINESS SYSTEMS

DOCFUSION - TRANSFORMING STRUCTURED DATA INTO SECURE, ACCURATE, AND COMPLIANT DOCUMENTS

Together, Microsoft and DocFusion enable organisations to automate document generation across enterprise systems while maintaining governance, compliance, and brand consistency

INTEGRATION ARCHITECTURE

DocFusion integrates easily with Microsoft platforms and enterprise applications running on Microsoft infrastructure

Typical integrations include:

- Microsoft Dynamics 365
- Microsoft Azure applications
- Microsoft SharePoint and document repositories
- Microsoft SQL databases
- Microsoft Power Platform applications
- Enterprise line-of-business systems connected through Microsoft infrastructure

DocFusion retrieves structured data from Microsoft environments and generates documents using centrally governed templates

Generated documents can then be stored in SharePoint, distributed through Microsoft workflows, or integrated with additional enterprise systems

Turn Microsoft data into accurate, enterprise-ready documents

THE CHALLENGE

Many organisations store critical data within Microsoft platforms but generating complex documents from that data often remains a manual process

Common challenges include:

- Manual document preparation
- Multiple versions of templates across departments
- Errors caused by copying data from Microsoft systems into documents
- Compliance risks due to uncontrolled document templates
- IT dependencies when updating document templates
- Inconsistent branding across customer-facing documents
- As volumes increase, these challenges create inefficiencies and risk

THE SOLUTION

DocFusion integrates seamlessly with Microsoft, enabling organisations to generate accurate documents using data from Microsoft systems

Users can design and manage templates using Microsoft Word while DocFusion handles the intelligent automation, data integration, and governance required for enterprise document generation

The result is a controlled, scalable document automation platform built around the Microsoft ecosystem

HOW INTEGRATION WORKS

1. DATA CAPTURE

Data is captured within Microsoft platforms

2. DOCUMENT GENERATION

DocFusion generates dynamic documents using approved templates and real-time

3. WORKFLOW AND DISTRIBUTION

Documents are routed through internal workflows or distributed through Microsoft systems

4. DOCUMENT DELIVERY

Documents are delivered in the required format

5. STORAGE AND GOVERNANCE

Documents can be automatically stored in enterprise document management systems with full audit trails

MEASURABLE IMPACT

Organisations implementing document automation often experience significant operational improvements

Typical outcomes include:

Up to 80% reduction in document preparation time

Up to 70% reduction in operational document costs

Up to 90% faster delivery of customer documentation

Improved governance and reduced compliance risk
Greater operational efficiency across document-driven processes

KEY BENEFITS

- Faster Document Production
- Automatically generate documents directly from Microsoft data
- Reduced Operational Risk
- Ensure every document is generated using approved templates
- Strong Governance
- Maintain centralised template control and consistent branding
- Seamless Microsoft Integration
- Connect document automation directly to Microsoft Dynamics
- Business User Empowerment
- Templates are created in Microsoft Word without relying on developers
- Enterprise Scalability
- Automate high-volume document generation across departments
- Industry Applications

READY TO TRANSFORM YOUR MICROSOFT DOCUMENTS?

Automate document generation.
Improve governance and compliance.
Deliver accurate documents at enterprise scale
